

Notepad 2.0

The Windows 11 Notepad you know, with file groups, a Markdown editor you type straight into, viewers for spreadsheets, data, PDFs and Word, several windows and a Quick Note one keypress away.

Install, then your first five minutes

Setup takes a few seconds, installs for your user only (no admin password), and doesn't need a restart.

Install

- Run **Notepad 2.0_0.1.0_x64-setup.exe** (or the **.msi**).
- Open **Notepad 2.0** from the Start menu. The first time, it offers a short tour.
- To open your **.txt** and **.md** files with it, or to replace **notepad.exe**, see *Windows integration* on page 7.

Seven things to try

1

New text file: **Ctrl + N**

Start typing. It autosaves until you choose where to keep it.

2

New Markdown file:

Ctrl + Alt + N

It opens in the Visual editor. Use the toolbar for headings, colours, lists and tables.

3

Make a file group

Right-click a tab, then *New file group...*
Drag more files onto it.

4

Change the layout

Click *Tabs* (top right): tabs on top, a sidebar, a rail, or the compact rail.

5

Split the window

Click *Split* or press **Ctrl + **: two documents side by side.

6

Tear off a window

Drag a tab outside the window. It opens in a new window.

7

Quick Note: **Win + Alt + N**

From anywhere. Type, click away, it's saved.

?

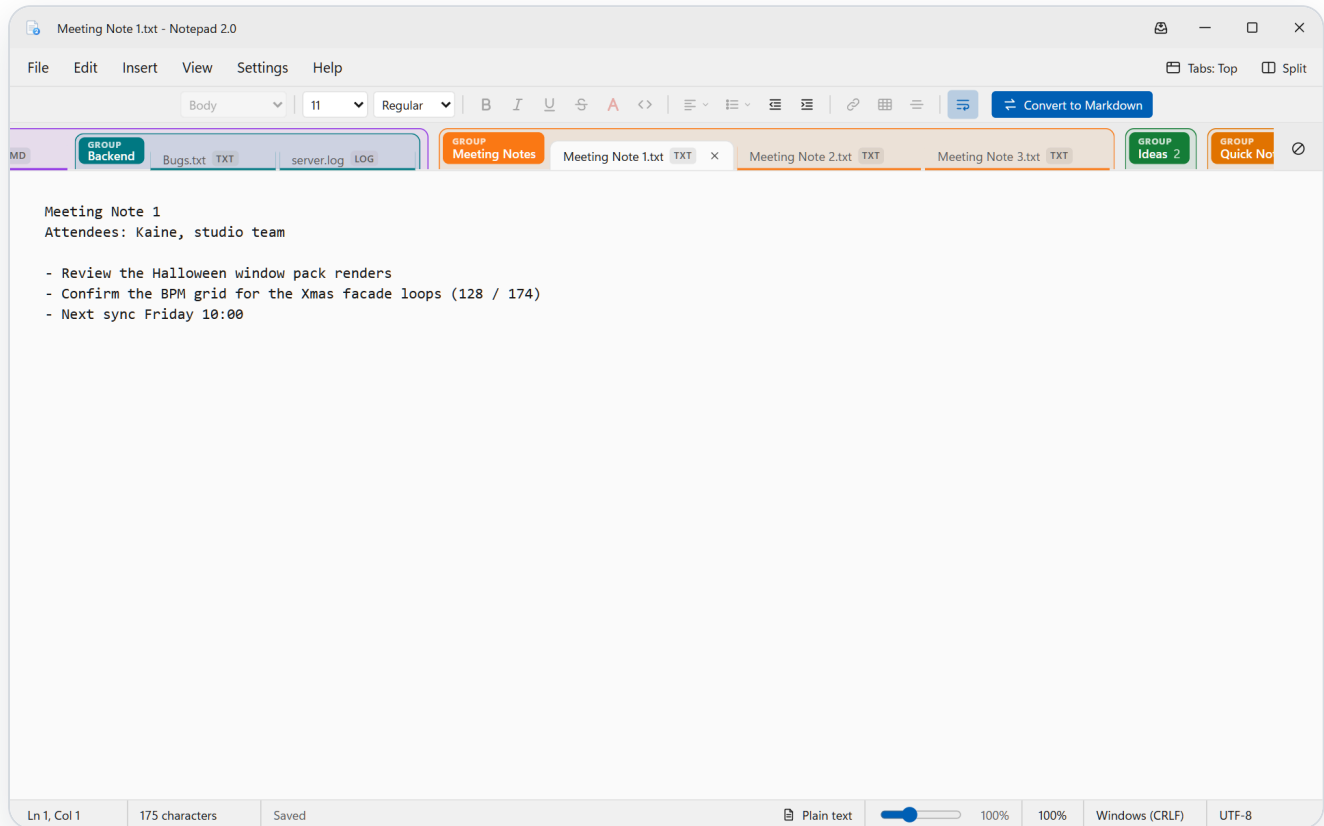

Take the tour

Help → *Startup guide* spotlights each part of the window in 13 steps.

Nothing is ever lost. Untitled notes and Quick Notes save as you type. Opened files save with **Ctrl + S** like Notepad, but unsaved edits survive a crash or reboot and come back with a banner.

It's still Notepad

Same menus, same shortcuts, same instant start. Plain text stays plain, and a file you haven't changed is never altered by a single byte.

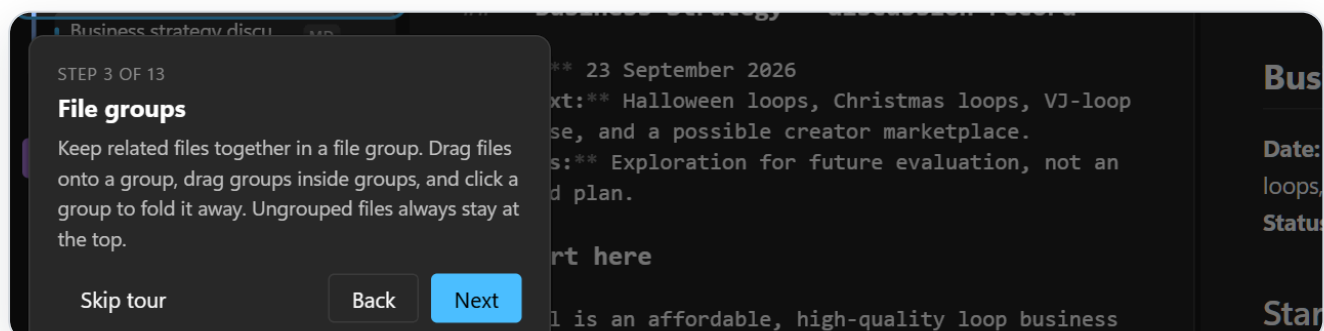

Light theme, tabs on top, a plain .txt file. On a text file only the tools plain text can hold are active, and a **Convert to Markdown** button appears.

Everything Notepad does

- Find, Replace, Go to line, Print
- Date and time with **F5**
- UTF-8, UTF-16 and ANSI; CRLF or LF, shown in the status bar
- Font picker, word wrap, text zoom

Look and feel

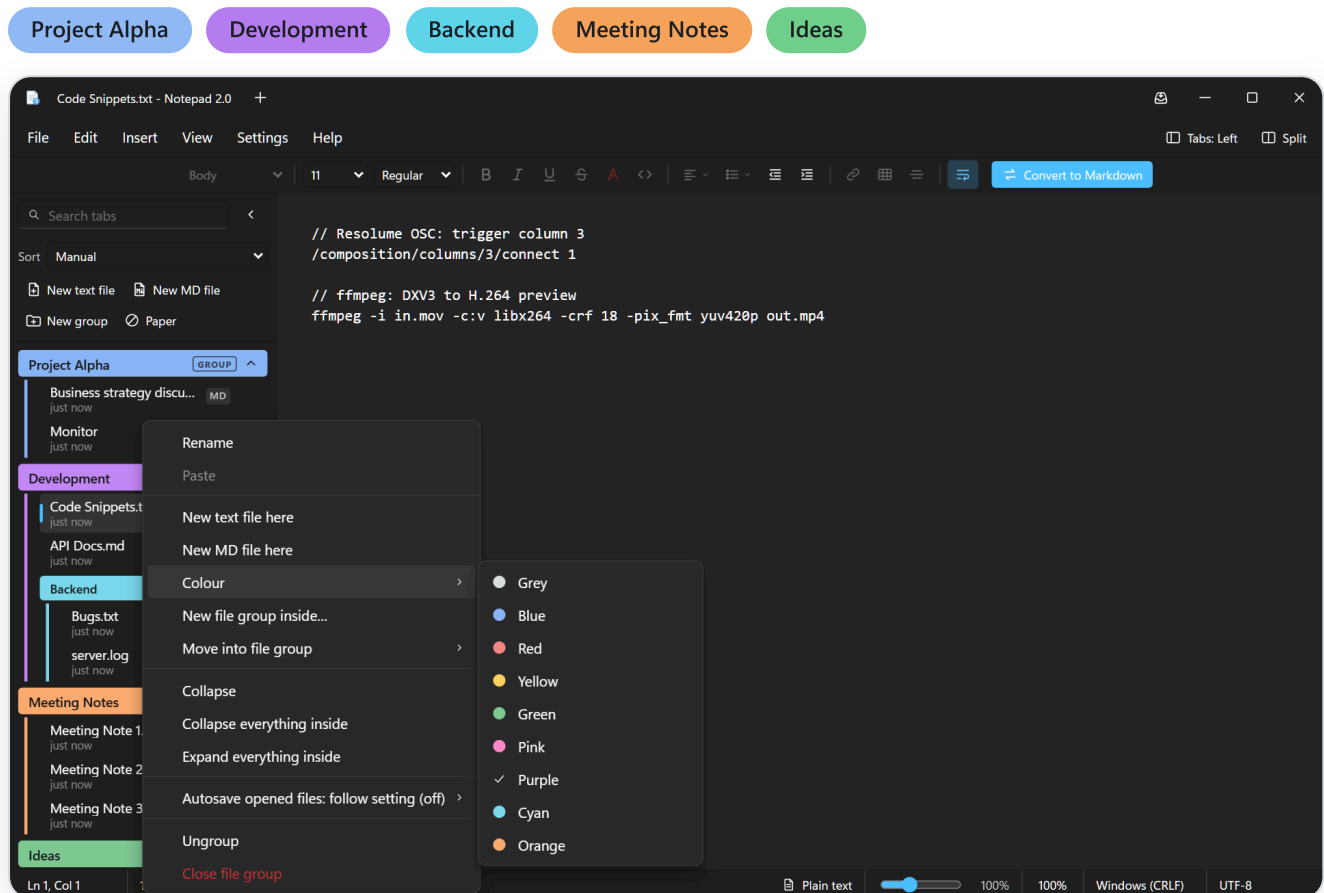

- **Light, Dark or System** theme
- **Interface size** 75–150% from the status-bar slider. Hold **Shift** and press **+** / **-** outside the text to nudge it.
- Text zoom (**Ctrl** **+** / **-**) is separate

New here? *Help* → *Startup guide* is a 13-step spotlight tour of the window, offered the first time you start.

File groups, tabs and the sidebar

Keep related files together in coloured groups. Groups can sit inside groups, and ungrouped files always stay at the top.

Right-click a group to rename it, add files, change its colour, nest a group inside, collapse everything, or set autosave for the whole group.

Layouts

- **Tabs on top**, joined to the page
- **Sidebar** on the left: drag its edge to resize
- **Rail**: a slim list of groups
- **Compact**: group names written vertically

Sort

Manual, Date modified, Date created, Name A–Z or File type. Sorting is a view: your own order is kept.

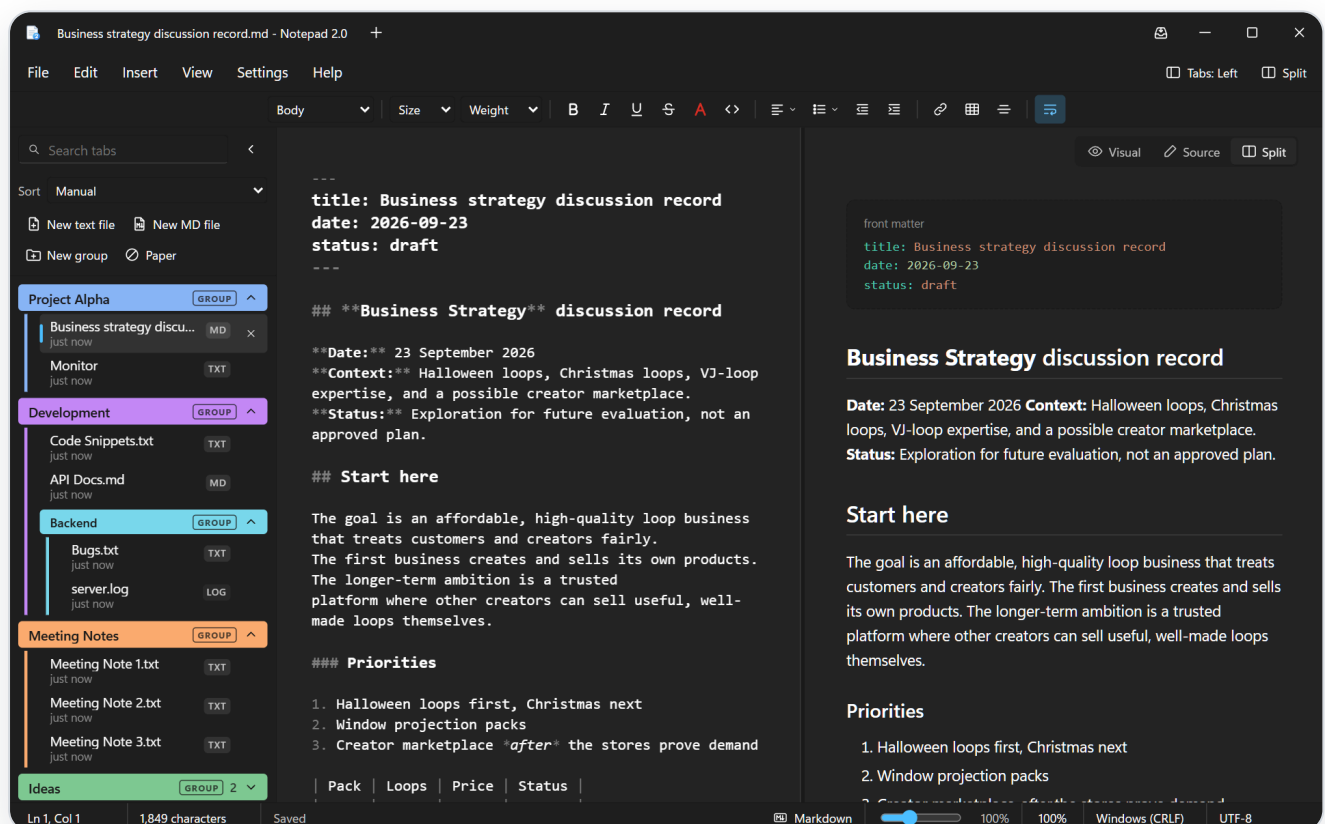

File actions

- **Rename in place**: double-click or **F2**. Saved files are renamed on disk, never over an existing file.
- **Duplicate, Copy, Paste** into another group. Copies are named *Name (2).ext*.
- **Open in File Explorer**
- Right-click → **Colour** tints a single tab

Markdown you can type into

Three views of the same file. Switch with the control in the document's top-right corner, or press **Ctrl + Shift + V**.

VIEW	WHAT IT'S FOR
Visual	A true WYSIWYG editor. Type straight into the formatted document, like a word processor.
Source	The raw Markdown, with syntax highlighting.
Split	Source on the left, a live preview on the right: tables, task lists, footnotes, front matter, maths, Mermaid diagrams, highlighted code.

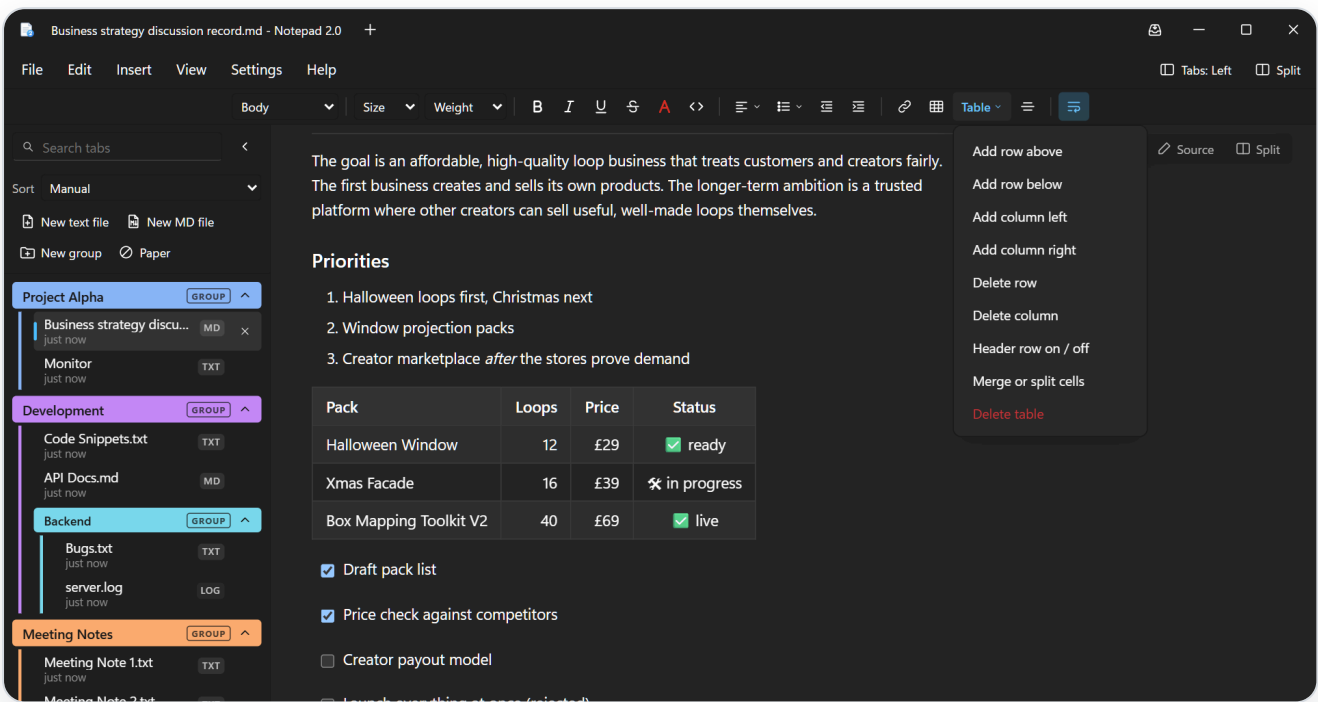

Split view. Formatting Markdown can't express (underline, colour, alignment) is saved as the small HTML tags GitHub understands, so files look right there too.

Read aloud. Right-click the page or press **Ctrl + Alt + R** to hear it (the selection, or the whole page). It uses the natural Kokoro voice when its server is running, and a Windows voice otherwise; Settings → Read aloud sets it up.

Locked blocks. Front matter, maths, Mermaid and other raw HTML show as locked blocks in Visual so nothing is mangled. Double-click one to edit it in Source.

Tables, inserts and paper

Click inside a table and a **Table** menu appears on the toolbar.

Add or delete rows and columns, toggle the header row, merge or split cells. Drag borders to resize. Cells hold formatted text and lists.

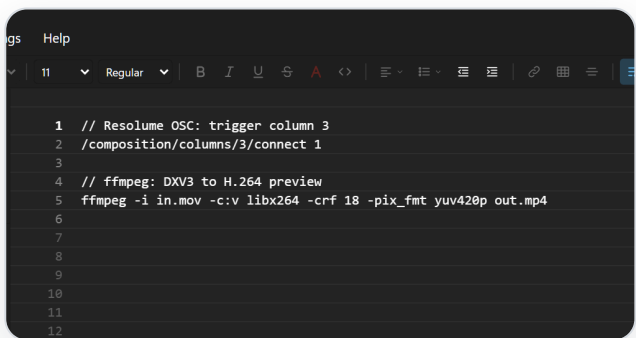

Insert menu

Page break, line break, image, table (with a size picker), link (**Ctrl** + **K**), horizontal line, date and time.

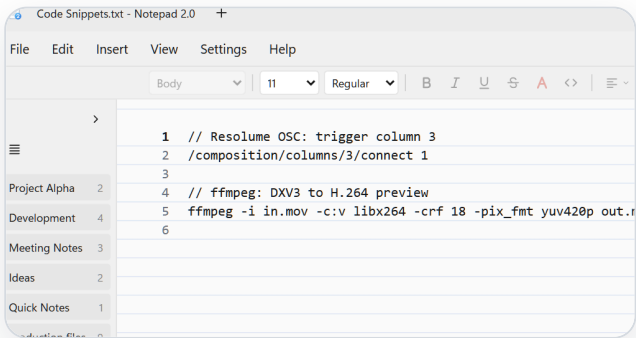

Paper

- None** A clean page
- Code** Line numbers down the whole page
- Lines** Ruled writing paper
- Grid** Graph paper

For every tab or per tab. **Page margin** (0–200 px) works in every view.

Code paper

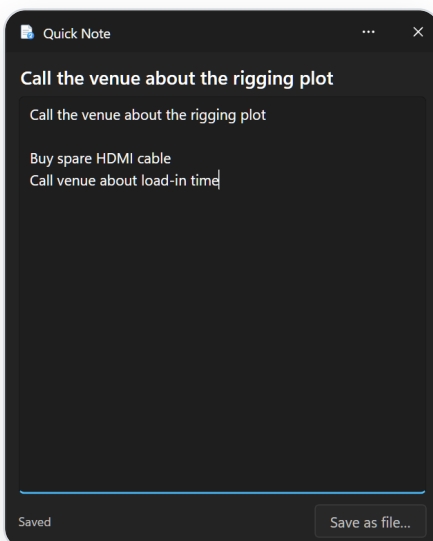

Lines paper, with the slim rail

Windows, Quick Note and dictation

Several windows

- **Drag a file, group or sub-group outside the window:** it opens in a new window at the pointer.
- **Drag between windows** to move items, dropped exactly where you let go.
- **Close a window** and its files move into the window you used last. Nothing is lost.
- **Restart** and every window comes back where it was, the last one you used in front.
- Opening a file that's already open elsewhere brings that window forward.

Quick Note

Press **Win + Alt + N** anywhere, or click the tray icon. A small always-on-top note pops up above the tray and saves as you type. Your Quick Notes collect in a **Quick Notes** group in the main window.

Dictate

Click the **microphone** button in the Quick Note to dictate with Windows voice typing (the same as **Win + H**). Speak, and your words appear in the note.

Windows integration

In *Settings* → *Windows integration*:

- Default app for .txt and .md
- **Replace notepad.exe** (one admin prompt, reversible)
- *Edit with Notepad 2.0* in File Explorer's right-click menu
- Start with Windows, quietly in the tray

Uninstalling removes all of these.

Split view

Click **Split** (top right) or press **Ctrl + **. Click a side, then a tab, to load it there. The same document can be on both sides; typing shows on both.

Spreadsheets, data, pages, PDFs and more

Open a file and Notepad 2.0 picks the right viewer. Text files keep a **View / Source / Split** switch, so you can read them formatted and still edit the raw text.

FILES	SHOWN AS
CSV, TSV	A grid with a sticky header; click a column to sort. Edit in Source.
XLSX, XLS, ODS	A grid per sheet with sheet tabs; values as Excel shows them. <i>File → Save sheet as CSV...</i>
JSON, YAML, XML	A collapsible tree. A file with a mistake opens beside its source with the error line.
TOML, INI, logs	Highlighted text; ERROR lines red, WARN amber.
HTML	The page with its own styling. Scripts never run.
Images, PDF, Word	Zoomable images; Edge's PDF viewer; Word as formatted text with <i>Open in Word</i> .

	Role	Performer	Scenes	Fee	Status
1	Stagehand	Jo Reyes	All	£480	Confirmed
2	Pumpkin King	Sam O'Neil	5	£700	Pending
3	Ghost Host	Ravi Patel	2, 3	£900	Confirmed
4	Narrator	Ann Hale	1, 4, 9	£1250	Confirmed
5	Choir (x4)	Hollow Voices	6-8	£2400	Confirmed

A CSV as a sortable grid

```

{
  "project": "Halloween Window Pack",
  "fps": 50,
  "resolution": { "width": 3840, "height": 1152 },
  "codecs": ["DXV3", "H.264"],
  "loops": [
    { "name": "Haunted Porch", "seconds": 16, "done": true },
    { "name": "Pumpkin Parade", "seconds": 32, "done": false }
  ],
  "upload": null
}

```

JSON: source and tree side by side

Links go where they point. In your notes, a link to a file opens it in a tab and a link to a **folder** opens File Explorer there, e.g. [Art](../Art%20Refs/). In the Visual editor, **Ctrl** +click to follow a link. *Insert → Link* has **File...** and **Folder...** buttons.

Keyboard shortcuts

Every Notepad shortcut works as before. These are the ones worth learning.

FILES AND TABS

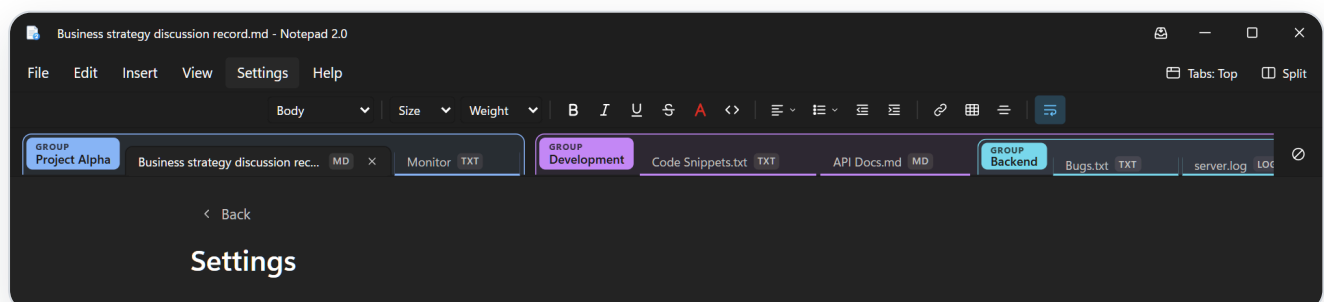

Ctrl + N	New text file
Ctrl + Alt + N	New Markdown file
Ctrl + O	Open
Ctrl + S	Save
Ctrl + Shift + S	Save as
Ctrl + Alt + S	Save all
Ctrl + W	Close tab
Ctrl + Shift + W	Close window to the tray
Ctrl + Shift + G	New file group
F2	Rename the current file
Ctrl + P	Print
Win + Alt + N	Quick Note, from anywhere

EDITING AND VIEW

Ctrl + F	Find
Ctrl + H	Replace
Ctrl + G	Go to line
F3 / Shift + F3	Find next / previous
F5	Insert date and time
Ctrl + K	Insert link
Ctrl + click	Follow a link (Visual)
Ctrl + Shift + V	Visual → Source → Split
Ctrl + \	Split view on / off
Ctrl + J / [	Indent / outdent a list item
Ctrl + + / - / 0	Text zoom in / out / reset
Shift + + / -	Interface size (outside the text)
Win + H	Dictate
Ctrl + Alt + R	Read aloud / stop

Where your notes are kept

- Files you open or save live **wherever you put them**, as ordinary .txt and .md files.
- Untitled notes, Quick Notes, groups, window layout and settings live in **%APPDATA%\Notepad2**. Paste that into the File Explorer address bar to open it.

Settings: interface size, theme, font, tabs and groups, saving, Quick Note and Windows integration.
